We feel that as a Custom Rod Builder you should be able to compare blanks at a glance to make a more informed decision about the rod you plan to build. That's why Point Blanks go beyond the obscure 1 thru 5 power rating system to give you an actual Power Reading. We load blanks into a horizontal fixture, measure the weight it takes to bend the blank one third of its working length and then measure the angle of the tip at this weight. Best of all, we include that information in all charts "PB" is Point Blank; "66" or "73" is length in feet and inches; "1" or "2" is number of pieces. The chart below provides information on both the RDA (Rod Deflection Analysis) and The Common Cents Systems.

Point Blank #	Applications	Butt Dia. mm	Tip Size	Weight oz.	RDA Analysis		CCS Analysis
